CSE0001 – Digital Literacy Project Report

Name: Lakshay Singh
Branch: B.Tech (CSE w/ Cyber Security and Digital Forensics)
Year: 1st Year

Introduction

This project is a Digital Literacy Portfolio created as part of the CSE0001 course. The main aim of this project is to develop a strong understanding of digital tools, online communication, and cyber safety, which are essential skills in today's technology-driven world. Digital literacy is not only about using devices but also about using them responsibly and effectively.

Throughout this project, I completed multiple tasks that helped me explore different aspects of digital literacy. These included creating an infographic, building a professional digital portfolio, using coding platforms, understanding email etiquette, and learning about cybercrime. Each task was designed to improve both theoretical knowledge and practical skills.

I also learned how to organize and present my work using

GitHub, which is an important platform for developers and students. This project helped me understand how digital tools can be used in academics and future careers, making it a valuable learning experience.

Task 1 – Digital Literacy Infographic

For Task 1, I created a digital literacy awareness infographic using Canva. The main objective of this task was to present important information about digital literacy in a visually appealing and easy-to-understand format. I included key topics such as the definition of digital literacy, safe internet practices, and useful digital tools for students.

While designing the infographic, I focused on maintaining a clean layout with proper spacing and color contrast. I used bullet points instead of long paragraphs to make the content more readable. I also added icons and simple design elements to improve visual appeal and engagement.

One challenge I faced was balancing the amount of information. Adding too much content made the design look crowded, while adding too little made it less informative. I had to carefully select the most important points.

This task helped me understand how visual communication works and how design tools like Canva can be used to share information effectively. It also improved my creativity and presentation skills.

Task 2 – Digital Portfolio

In Task 2, I created professional profiles on GitHub, LinkedIn, and Kaggle to establish my digital presence. These platforms are widely used in the professional world and play an important role in building a strong online identity.

On GitHub, I created a profile README to introduce myself and showcase my interests. This platform will help me upload and manage my projects in the future. On LinkedIn, I added my educational details and created a basic professional profile, which will help me connect with professionals and explore opportunities. On Kaggle, I set up a profile to learn data science and work with datasets.

This task helped me understand the importance of maintaining a professional online presence from the beginning of my academic journey. Over the next four years, I plan to regularly update these profiles, upload projects, and build connections.

Overall, this task gave me a clear understanding of how digital platforms can support career growth and skill development.

Task 3 – Platforms

For Task 3, I explored both coding and collaboration platforms. I used HackerRank to practice coding and completed a beginner-level problem. This helped me understand basic programming concepts such as input, output, and logic building. It also improved my confidence in solving coding problems.

In addition, I created a Google Form titled "Digital Literacy Awareness Quiz." The form contained five questions, including multiple choice and short answer types. After creating the form, I linked it to Google Sheets to automatically collect and organize responses.

This task helped me understand how coding platforms can be used to improve technical skills, while tools like Google Forms and Sheets can be used for collaboration and data management. These tools are very useful in academic projects, surveys, and teamwork.

Overall, this task enhanced my understanding of practical digital tools and how they can be used effectively in real-life situations.

Task 4 – Email Etiquette

In Task 4, I focused on professional communication through emails and social media etiquette. I wrote two formal emails: one requesting an assignment extension and another expressing interest in a summer internship. While writing these emails, I ensured that I followed proper structure, including a subject line, greeting, body, and closing.

I also created a checklist of do’s and don’ts for responsible social media use. This included guidelines such as being respectful, avoiding sharing personal information, and not spreading false information.

This task helped me understand that communication is an important part of digital literacy. Poor communication can lead to misunderstandings and missed opportunities. For example, sending an email without a proper subject or using informal language can create a negative impression.

By following proper etiquette, communication becomes clear and professional. This task improved my writing skills and taught me how to communicate effectively in academic and professional environments.

Task 5 – Cybercrime Awareness

In Task 5, I studied cybercrime with a focus on UPI fraud, which is very common in India. I created a case study explaining how this type of fraud occurs, who is usually targeted, and what the consequences are.

I learned that fraudsters often use tricks such as fake payment requests, phishing links, or impersonating bank officials to gain sensitive information like OTPs or UPI PINs. Many people fall victim due to lack of awareness.

I also created a prevention checklist that included tips such as not sharing OTPs, verifying payment requests, and using trusted applications. I included the National Cyber Crime Portal and helpline number 1930 for reporting fraud.

This task increased my awareness about online threats and the

importance of being cautious while using digital platforms. It also helped me understand how awareness and preventive measures can reduce cybercrime.

Conclusion

This project was a valuable learning experience that helped me understand the importance of digital literacy. Through different tasks, I developed skills in design, communication, coding, and online safety.

I learned how to use various digital tools effectively and responsibly. I also understood the importance of maintaining a professional online presence and communicating properly in digital environments.

Overall, this project has improved my confidence and prepared me for future academic and professional challenges. It has given me practical knowledge that will be useful throughout my career.
